Biomass Producer or Collector Tax Credit  
Rule Advisory Committee

## Concept Discussion **What material is eligible?**

- For these rules, biomass is defined in ORS 315.141.
- The department may add additional criteria to this definition. For example material used to produce firewood or charcoal is not eligible material.
- Yard waste includes woody material. Yard debris constitutes biomass from residential property, landscaping activities, or is collected in an urban or sub-urban area.
- The amount of manure or rendering offal is calculated before the addition of any process or waste water. If accurate measurement is not practicable the department may accept a formula based measurement.
- A credit may not be claimed more than one time for each unit of biomass.
